Exciting applications for a turn-key structured light generator

Many applications exist for structured light. However, a barrier of entry exists for non-experts. Button Optics has created an all-in-one solution for generating different kinds of beams. Over the last year we have created a fully functional product interfacing with cameras and computer software. Moreover, we have expanded our product suite to include a diagnostic device. In this talk I will highlight some of the applications that are relevant for the immediate future and also our longer-term plans.
